

## **Lesson 11. Bibliography**

A bibliography is a list of the sources of information you read in preparing an article, essay or report. It allows you to acknowledge others who have contributed to your work, or whose ideas have been incorporated in your activity. It allows readers of your article to follow up on particular areas that they are interested in.

In this activity, students become acquainted with and practice the way a bibliography is compiled using the accepted standards of the scientific community.

**Learning Goals:** Students will be able to:

- explain the importance of a bibliography.
- compile a bibliography based on your review of related literature.

**Materials:**

Research articles, paper, pen

**Procedure:**

In this activity you will learn how to compile a bibliography. There are international conventions for compiling bibliographies. The details can vary, but examples of standard formats are given in the accompanying hand-out. Once you have studied these, create a bibliography for your project.
